How can the CSL Router from SMS help improve your connectivity?

CSL Routers from SMS enable connectivity to CCTV monitoring in locations of poor broadband or where a standalone, secure and cost effective network is required. The CSL Router with ARC Monitoring from SMS provides instant connectivity for CCTV and video verified systems. Available in a range of connectivity options it combines CSL's critical connectivity with the guaranteed response of SMS.

SECURITY LAN → PRIVATE MOBILE LINK → **CSL SECURE NETWORK** → ARC LINK

CSL ROUTER

Rapid connectivity for any application

CSL ROUTER WITH ARC CONNECTION + CSL SIM (10GB)

The CSL Router with ARC Connection offers a solution for any installation when broadband is unavailable, to ensure security is not compromised.

It is supplied with the appropriate SIM for its usage and is tailored to suit most CCTV installations connecting to an ARC.

CSL ROUTER WITH END POINT CONFIGURATION + CSL SIM (5GB)

The CSL Router with End Point configuration can upgrade any existing broadband service to an Instant Private Network in instances where broadband is already available. It encrypts all data sent via the CCTV system, is GDPR-ready, requires no firewall configuration for quick installations and can also provide a back-up 4G service via the CSL SIM.

Additional Features and Benefits include

- Ideal for applications with limited or no Broadband Connectivity.
- Enhanced Security with Private APNs and secure Gemini Platform.
- The Router is supplied pre-configured for a fast installation – making it easy for the Installer.
- 4G Connectivity.
- Fully Managed Service.
- Ideal for both permanent or semi-permanent installations.
- No over usage charges (fair usage policy applies).
